

Tantalum Beads

art. no. 20401 - 20404

Tantalum Beads

The beads have a high density that makes them ideal as radiograph markers. Tantalum is a biocompatible material.

Quality assured

The beads are checked for levels of nitrogen, silicon, iron, nickel, niobium, molybdenum and tungsten.

Each batch is quality assured and delivered with a report conforming to the EN 10204 standard.

High tolerance

The beads have a high spherical tolerance within ± 0.005 mm.

Practical container

The beads are delivered in a practical Eppendorf tube. Each tube contains 100 beads.

Technical data:

- Dimensions: 0.8 mm, 1.0 mm and special sizes 0.5 mm and 1.6 mm
- Material: Tantalum Grade R05200 acc. to ASTM F 560-98 (x)
- Tolerance: ± 0.005 mm
